

**The Rules for
UK Mountain Soaring Championship
2008**

Background

This competition was conceived to make the most of the soaring conditions at Aboyne. It is intended to be a friendly yet competitive event. It is a non-rated, handicapped competition.

Tasks will include pre-declared cross-country races or Assigned Area Tasks (AAT). Points will be awarded based on the Regional Scoring System. The pilot or team amassing the greatest number of points during the week will be declared the winner.

There will be a separate Height Gain Competition for the pilot/team with the greatest cumulative height gain throughout the week. This contest will run in parallel with the Cross Country Competition.

The 2008 BGA Competitions Rulebook, unless otherwise stipulated in this document, will apply.

General

Safety is the prime consideration and good airmanship must be exercised. When scoring, the Competition Director (CD) will take into account any action which may compromise safety by deducting points.

A serious view will be taken of Airspace and Airmanship infringements. Sanctions may be severe, depending on the specific incident.

Safety Related Penalties, unless other wise stipulated by the Competition Director, shall be awarded according to the 2008, BGA Competitions Rulebook.

Loggers must be used as primary evidence, although any proof that a turning point has been rounded will be acceptable.

There is no flying permitted in or near cloud, within 10km of the site, the start or any turning point. If tempted to fly in cloud at any other time, remember there is a lot of Granite about. A radio call to indicate entering cloud, location & height must be made.

Gridding

Competition pilots must have their glider on the grid in the day order or parked to the rear of the grid, by arrangement with the Launch Marshal, by no later than the time on grid published for the day. Pilots must then be available, with their aircraft, by no less than 15 mins before the published first launch for the day. At first launch time either:

1. The grid will be launched if one or more competitors elect to take a launch on Task.
2. An announcement will be made to either:
 - a. Delay the start for the same Task.
 - b. Fall back to the next briefed Task with a new first launch time.
 - c. Announce a re-brief for a new Task.
 - d. Scrub the day.

For any subsequent first launch time, gliders and pilots must be gridded up 15 mins before that first launch time.

Launching & Re-lights

A competition launch after a retrieve is permitted if the glider lands within 10km of the start. The specific permission of the CD must be sought. This will only be given if the CD is satisfied that a thorough and independent rigging and control check has been carried out. Zero points will be awarded for the previous flight if the pilot declares a Start.

Self Launching/Sustaining gliders

These types will be scored to their furthest point down track before engine start.

Any engine start further than 10km from the start prevents a relight.

Any engine start within 10km of the start requires a land back and relight. In the case of self launching motor gliders this must include, clearing the active runways and shutting down then seeking permission from the Launch Marshal or Competition Director before re-start and take off.

Turbo motor gliders are permitted one airborne engine start of approximately 2 mins duration to test the integrity of the engine detection equipment and prime their fuel system. This must be done immediately after aerotow and be begun at or below maximum release height for the day and before any competition start for the day. The Glider may not climb above the max release height.

Starting

Unless otherwise specified during briefing;

Wave Tasks - The start sector is formed by a half cylinder of 6km radius centred on the Start Point and orientated opposite to the direction of the first turning point. Its maximum height shall be 12,000 feet. It shall be surrounded by a further ½ km horizontal and 250 feet vertical penalty start volume.

Pilots may Start horizontally in any direction or vertically above 12,000 feet.

Pilots must make a radio call to declare START TIME AND HEIGHT and have it confirmed by Control, otherwise START TIME AND HEIGHT will be taken as the last time recorded in the Start Sector.

Thermal Tasks - The start sector and rules are described in the 2008 BGA Competition Rulebook or as specified by the CD.

If a held start is in operation the pilot must show that they were in the start sector after the gate is opened. If not, then no points will be scored for the day.

Turning points

Standard 2008 BGA competition rules zones will be used for turning points.

If there is no evidence that the glider has been in the control sector or standard penalty area, 25 pts will be deducted for every subsequent 100m to the nearest approach to the sector.

Finishing

If a pilot selected start height is used then the finish height must be no more than 1000m below that start height. If not, 3 points will be deducted for every 10m below.

UKMSC

Finishes should not compromise good airmanship and should be in compliance with the 2008 BGA Competition Rule Book.

Scoring – Cross Country

Scores are calculated according to 2008 BGA Regional Rules.

Height Gain Competition

The Height Gain Competition is run independently of the main competition. The winner is the Glider/Team which accumulates the greatest amount of height climbing over the week. The [Highest point – Lowest Point] accumulated over the week.

The Most Important Rule

The Competition Director has sole and final discretion in all matters affecting the Competition.
